Are you involved in the *Manufacturing, Transportation or Storage* of Pharmaceutical or Medical Device products and need a better understanding of your responsibilities to ensure supply chain compliance? If so, the IEA GDP Champion training course is for you.

The IEA's Good Distribution Practice (GDP) Passport plays a key role in assuring security in the life sciences supply chain through compliance and understanding risks and responsibilities. The GDP Champion is the key contact point on all compliance and quality aspects of GDP practices along the supply chain.

Increasing demand from industry and evolving EU Guidelines for Good Distribution Practice has brought GDP to the forefront of Pharma, MedTech and Logistics operations. This course covers the practical implementation of GDP in the Supply Chain.

As part of the GDP Passport Scheme, the IEA is running a GDP Champion 3 Day Programme to fully address the issues above.

*IEA members: €1,850 / Non IEA members: €2,250*  
*Grants available, please contact Fiona 086 1423271*
